

App's purpose

- 1) Examine the effects of ChatGPT on the ideas generated by the users.

Audience

- 1) ChatGPT users and non-users

Key Features

- 1) Users can sign up and log in
- 2) Users can create slogans for six cocktails
- 3) Users in the ChatGPT group can click on the “generate slogans” button to get ideas.
- 4) Users will see a thank you page at the end of the tasks.

Instructions to run the project

- 1) First, `cd` into the `cocktails` directory
- 2) Then run `python manage.py runserver` to start the server.

Credential for superuser

To access the database, go to <http://localhost:8000/admin/>

Username: hello

Password: 09876543

Testing instructions

To test for sign-up, go to <http://localhost:8000/register/>. When creating your password, make sure that it is at least 8 characters long, not entirely numeric, and not too common.

To test for sign-in, go to <http://localhost:8000/login/>. You can test login with the credentials below.

Username: testtest

Password: appleapple

To test the dashboard, go to <http://localhost:8000/dashboard/>. If you do not check all the boxes on the dashboard, an error message stating “Please check all checkboxes before proceeding” will appear.

To test for the tasks, go to <http://localhost:8000/task1/> , <http://localhost:8000/task2/> , <http://localhost:8000/task3/> , <http://localhost:8000/task4/> , <http://localhost:8000/task5/> , <http://localhost:8000/task6/>.

The thank you page after the users complete all the tasks is located at <http://localhost:8000/final/>.

ChatGPT feature

Users will be able to click on the “generate slogan” button if they are in the ChatGPT group.
